NAME:_____ID:_____

Problem: Develop a class to measure distance as feet (should be int), inches (should be float).
Note: Use const, static, this, friend if applicable.

1. Include member functions to set and get attributes.
2. Include constructors and destructor.
3. Develop functions to add two distances.
4. Develop a function to display the result.
5. A sample main function to test the class.
